**食用野生動物危害說明**  
Edible Wild Animal Hazard Statement

野生動物存在較多的細菌、病毒、寄生蟲，其安全性不如家養動物。野生動物與人的共患病有100多種。這些病毒、寄生蟲、細菌存在於動物的肌肉、血液裏，通過蒸煮很難殺死，病毒傳染的危險性很高。例如：所謂的“五爪金龍”巨蜥是以腐肉為生，每條身上有上百條寄生蟲；而穿山甲皮下，寄生著很多蟲蟻，令人作嘔；人們愛吃的田雞，攜帶的寄生蟲可以直接進入人類的大腦。

There are many bacteria, viruses and parasites in wild animals, which are not as safe as domestic animals. There are more than 100 common diseases of wildlife and humans. These viruses, parasites, and bacteria are found in the muscles and blood of animals. They are difficult to kill by cooking, and the risk of virus transmission is high. For example, the so-called "five-claw golden dragon" monitor lizards live on carrion and each has hundreds of parasites; while pangolins are parasitized by many parasites and are sickening; pheasants that people love to eat carry Parasites can enter the human brain directly.

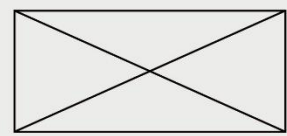

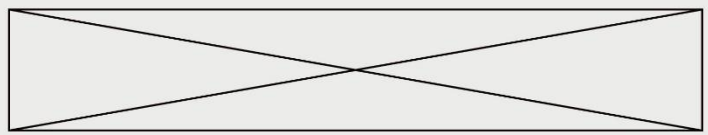

JU CHI YE WEI

全國數據統計/National Statistics [02.08.2020]

確診 34673 疑似 27657 重症 6101 死亡 724 治愈 2375

拒吃野味

食野性敗 Eating wild animals will destroy people.	民盛國安 拒啖野禽	饑野廢 Eating wild animals can kill people.	出百態醜血飲毛茹 必勝戰醫烈苛雖疫 People who eat wild animals are ignorant. The virus may be fierce, but doctors will beat it.
